Stability Analysis (contd.)

- Matrix method (accounting for boundary and as well as grid points)

$$T^{n+1} = AT^n + b$$

$$\varepsilon^{n+1} = A^{n+1}\varepsilon^0$$

ε^{n+1}: disturbance

A^{n+1}: depends on this coefficient.

A matrix is convergent if the spectral radius of it is less than 1

↳ multiplying matrix by itself again & again.

finding eigenvalues?

Gershgorin circle theorem
