Microscopy

Tuesday, 14 November 2023 10:36 AM

→ Measure of electron dose → on surface structure effects

→ Particles have different amount of facets → affecting reaction rate

EELS → electron energy loss spectroscopy

↓

zero-loss

Why electron microscopy?

e⁻

+ decrease in wavelength (have lower wavelength) → They are still electromagnetic radiation?

Birk → 0.65 Å resolution

+ e⁻ can exhibit particle-wave duality { diffraction, interference, photoelectric effect }

↓ wave ↓ particle

& e⁻ are scattered, photons are not → visible light spectroscopy

w/ gases
